

How many licks to the center of a Tootsie Pop? How many people are having sex at this moment? How long would it take a monkey on a typewriter to produce the plays of Shakespeare? For all those questions that keep you up at night, here's the way to answer them. And the beauty of it is that it's all approximate! Using Enrico Fermi's theory of approximation, Santos brings the world of numbers into perspective. For puzzle junkies and trivia fanatics, these 70 word puzzles will show the reader how to take a bit of information, add what they already know, and extrapolate an answer. Santos has done the impossible: make math and the multiple possibilities of numbers fun and informative. Can you really cry a river? Is it possible to dig your way out of jail with just a teaspoon and before your life sentence is up? Taking an academic subject and using it as the prism to view everyday off-the-wall questions as math problems to be solved is a natural step for the lovers of sudoku, cryptograms, word puzzles, and other thought-provoking games.

Hags Nook (Dr. Gideon Fell), Out of Time and Place, Nicky Fifth At The Jersey Shore, Aloha Spirit: Hawaiian Art and Popular Design, For the Love of a Child, Quiet Pioneering: Robert M. Stern and His International Economic Legacy (Studies in International Economics),

One of the odd things about the C-list celebrity life of a semi-pro blogger is that I get a bunch of requests to review books on physics-related. How many licks to the center of a Tootsie Pop? How many people are having sex at this moment? How long would it take a monkey on a

tions to calculate what you want to know. Let's say I wanted to know how many leaves are on a tree. I could first estimate that each branch has about 30 leaves. (Or, How to Estimate Damn Near Anything), because this book really does teach Fermi's theory of approximation, How Many Licks? bring the world of. How Many Licks?: Or, How to Estimate Damn. Near Anything. Aaron Santos. Click here if your download doesn't start automatically.
