

Identifies the main developments that occurred in international trade in steel over the period 1983 to 1993, on an area-by-area basis. During the period covered, the many changes that occurred in the world order had an impact on world trade in steel. The collapse of the CMEA, for example, led to a breakdown in the favored trading links between former Eastern bloc countries and a significant increase in exports to non-CMEA countries. The emergence of new dynamic economies with rapidly expanding steelmaking capacity and production levels also altered the pattern of steel trade flows. This report is a follow-up to the 1985 report titled *World Steel Trade Developments 1960-1983*.
